Case Study

Eneco Wind UK – Lochluichart Wind Farm

Background

Since the start of 2011, Mistral has been working with Eneco Wind UK on its 51MW onshore wind farm on the Lochluichart Estate in the Scottish Highlands, which gained development consent before Eneco took over the project in 2010.

What the campaign was about

Mistral has supported Eneco in its stakeholder engagement work in the local area, along with media liaison work for important milestones in the development of Lochluichart Wind Farm.

How was it done

- Eneco arranged regular meetings with the local community council and maintained an ongoing dialogue with local residents in the area
- Mistral has also liaised with the local media regarding key announcements for the wind farm, such as the start of construction in November 2011, as well as developing a website and written materials for the project

Results achieved

- Mistral has helped Eneco establish positive relationships with key figureheads from the local community, as well as ensuring local media and residents are kept fully up-to-date with the latest developments for Lochluichart Wind Farm. This has led to a positive impression of the development within the region
